Business question: Should a personal loan application be approved, denied, or escalated for manual review under the underwriting policy and escalation procedure in effect on its application date?

Scenario	What Should Be Retrieved?	What Should Be Excluded?	Why?
Normal: **APP-2026-01026**: MNT-01, applied 2026-04-01, income $25,000, score 732 (Moderate Risk), DTI 27.72, recorded `Under Review` / `UW-INC-001` (What is the decision for APP-2026-01026?)	`FIN-POL-001` v3 (CURRENT): Section 5.2 (minimum income, `UW-INC-001`, Under Review) and Section 9 (decision outcomes). `FIN-PROC-001` v2 (CURRENT): the escalation steps and status definitions. The chunks that should come back are the ones covering the minimum income rule and the decision outcomes in policy v3, plus the escalation steps in the procedure.	*v1, v2 policies and the CFPB Circular (should be "Under Review" so adverse-action reasons don't apply)* .	v3 is the only policy effective on 2026-04-01. It says income below $40,000 means Under Review and not an automatic denial. The procedure explains how the escalation is recorded. Key metadata: `doc_id`, `version`, `authority_status`, `effective_date`, section.

Context Conflict **APP-2026-01026**: MNT-01, applied 2026-04-01, income $25,000, score 732 (Moderate Risk), DTI 27.72, recorded `Under Review` / `UW-INC-001` (Since we used this for the decision, we now want to see which policy is used to determine the decision).	`FIN-POL-001` v3 (CURRENT): Section 5.2 (minimum income, `UW-INC-001`, Under Review) and Section 9 (decision outcomes). `FIN-PROC-001` v2 (CURRENT): the escalation steps and status definitions. The chunks that should come back are the ones covering the minimum income rule and the decision outcomes in policy v3, plus the escalation steps in the procedure	*v2 and v1 income and manual-review chunks, and the CFPB Circular (should be "Under Review" so adverse-action reasons don't apply)* .	v2 says similar things ($40,000 minimum, "should not receive automatic approval"), so embeddings can't separate them. **Does A superseded policy ranks first?** The CFPB Circular is about explaining adverse action, which isn't triggered by an Under Review outcome. Key metadata: `authority_status`, `version`, document type.
Point-in-Time / Authority: APP-2024-88185: MNT-01, applied 2024-12-30, decided 2025-01-02, DTI 38.25 (limit 36.5), recorded `v1` / `UW-DTI-001` (What version should this application use in regards to the DTI score?)	`FIN-POL-001` v1 (2024): the DTI-review language that was in force on 2024-12-30; the date applied.	*v2 (effective 2025-01-01, matches the decision date) and v3.*	For DTI Score, authority is set by `application_date`, not `decision_date`, and not by what's current today. v1 is SUPERSEDED now but was authoritative then, so a CURRENT-only filter would exclude the right answer. Key metadata: `effective_date`, a superseded/end date, `version`, plus `application_date` from the structured record.
